

MA 161 ONLINE, SUMMER 2026

Quiz 8: §4.5 (Part II), 4.6

Name: _____

Score: _____/20

PUID: _____

Length: 15 minutes

Directions: Follow these instructions carefully. Failure to do so may result in your quiz being invalidated and/or an academic integrity violation. All suspected violations of academic integrity will be reported to the Office of the Dean of Students.

- Complete each question below. There are 2 questions; the maximum score is 20 points.
- You have 25 minutes: 15 minutes to complete the quiz and 10 minutes to upload it to Gradescope.
- This quiz is closed book and closed notes. Calculators are not allowed.
- You are to work independently. External help (including, but not limited to, using the internet and generative AI) is prohibited.
- You may use your own paper to complete this quiz; you do not need to print this document.
- Adequate work must be shown for each problem. A question with little to no work, even with a correct answer, will result in a low score.
- Make sure your work is neat and legible, especially after it is scanned. Use proper notation, and clearly mark the question numbers and your final answer. Points may be taken off if part of your work is unreadable.

(The questions start on the next page, one problem per page)

1. [10 points] Jessica wants to make a box with a square base. She decides to make the top and bottom out of metal and the sides out of wood. If the wood costs \$10/ft² and the metal costs \$20/ft², what are the dimensions of the largest box Jessica can make with a budget of \$480?

For full points, include the units in your final answer.

$$V = x^2 h$$

$$480 = 10[4xh] + 20[2x^2]$$

$$480 = 40xh + 40x^2$$

$$12 = xh + x^2$$

$$h = \frac{12 - x^2}{x} = \frac{12}{x} - x$$

$$\Rightarrow V = x^2 \left(\frac{12}{x} - x \right) = 12x - x^3$$

$$\Rightarrow \frac{dV}{dx} = 12 - 3x^2 \stackrel{\text{set}}{=} 0$$

$$x^2 = 4 \quad ; \quad x > 0$$

$$x = 2$$

$$\frac{d^2V}{dx^2} = -6x \Rightarrow V''(2) < 0 \Rightarrow \text{Max at } 2$$

Thus, the dimensions are 2ft $\times$ 2ft $\times$ 4ft

2. [10 points] Approximate the value of $\sqrt{2}$ by finding a linear approximation of the function $\sqrt{x}$ at $a = 1$.

$$f(x) = \sqrt{x} ; a = 1$$

$$f'(x) = \frac{1}{2\sqrt{x}} \Rightarrow f'(1) = \frac{1}{2}$$

$$f(1) = 1$$

$$\begin{aligned} \Rightarrow L(x) &= f(1) + f'(1)(x-1) \\ &= 1 + \frac{1}{2}(x-1) \\ &= \frac{1}{2}x + \frac{1}{2} \end{aligned}$$

$$\text{Thus, } \sqrt{2} \approx L(2) = 1 + \frac{1}{2} = \frac{3}{2}$$
